And Technology Program

Theme Area: Facilities and Infrastructure
Program Area: Hydroelectric Infrastructure Protection
Project No.: FI00.20
Project Title: Reliability Centered Maintenance
Principal Investigator: Peter Tolen, e-mail: ptolen@do.usbr.gov

Abstract: Reliability Centered Maintenance is a methodology used to establish maintenance policy for physical assets. In the past, Reclamation managers have not had the tools required to establish maintenance policy in a rigorous and disciplined manner. There are a variety of RCM methodologies available for use by Reclamation. This research will try and identify the RCM methodology which is best suited for use by Reclamation. It will compare different methodologies through the use of pilot studies.
